

AI Chatbot QA Checklist

A practical pre-launch check for small-business AI chatbots and assistants.

Work through each item before you let an AI tool answer real customers. Check the box when an answer is verified against your approved business information. Anything you cannot check is a finding to fix.

Before you test

- ☐ List the top 30–50 questions real customers actually ask.
- ☐ Gather approved answers: services, pricing, hours, policies, service area.
- ☐ Confirm your booking, contact, and human-escalation paths.
- ☐ Note anything the bot must never say (guarantees, legal/medical/financial advice).

Accuracy

- ☐ Answers match your website and current pricing.
- ☐ No outdated hours, promotions, or service-area information.
- ☐ No invented features, discounts, warranties, or guarantees.

Completeness

- ☐ Each answer includes the next step (book, call, or link).
- ☐ Multi-part questions are answered fully, not partially.
- ☐ Common follow-up questions are handled.

Consistency

- ☐ The same question asked three ways returns the same answer.
- ☐ The bot agrees with your website and written policies.
- ☐ Tone and facts stay consistent across topics.

Safety & risk

- ☐ No medical, legal, or financial advice beyond your scope.
- ☐ Sensitive or high-stakes topics escalate to a human.
- ☐ No unsupported claims, promises, or made-up details.

Escalation

- ☐ There is a clear path to a human when needed.
- ☐ A phone number, booking link, or callback is offered.
- ☐ After-hours requests are handled gracefully.

Brand & tone

- ☐ Voice is professional and on-brand.
- ☐ No robotic, vague, or overly casual replies.
- ☐ Business name, locations, and spelling are correct.

Go-live decision

- ☐ All critical issues are fixed and re-tested.
- ☐ Owner has signed off on the answers.
- ☐ A monitoring plan is in place for future changes.
